Overview

The Cloud Billing Connector (CBC) is a centralized solution designed to streamline the management of global billing data within TD SYNnex. It automatically gathers raw billing records from StreamOne ION, performs validation and transformation processes, and then distributes the finalized data to regional ERP systems. This workflow ensures consistent, accurate financial reporting and precise invoicing across all regions.

About this document

This document provides step-by-step instructions to understand and navigate through the Cloud Billing Connector dashboard.

It outlines the core functionalities of the CBC system, ensuring users have the required information during the initial stages of implementation. Additionally, it covers key features such as order limits, order status tracking, vendor-level consolidation, invoice text updates, SKU mapping (backend and UI), the BitTitan vendor billing process, and StarSoft billing expansion.

Key features

- Connects StreamOne ION to multiple ERP platforms, for automated invoice delivery.
- Allows you to review, approve, or decline billing statements, before invoicing.
- Directly generates invoices from approved billing statements.
- Reduces manual processing time and minimizes human error.
- Consolidates billing data from various cloud providers into a single workflow.

Getting Started

This section includes the following topics.

- [Obtain access to the environment](#)
- [Sign in to the Cloud Billing Connector dashboard](#)

Obtain access to the environment

Ensure that you have obtained permissions to access the Cloud Billing Connector dashboard.

The Cloud Billing Connector dashboard includes the following environment.

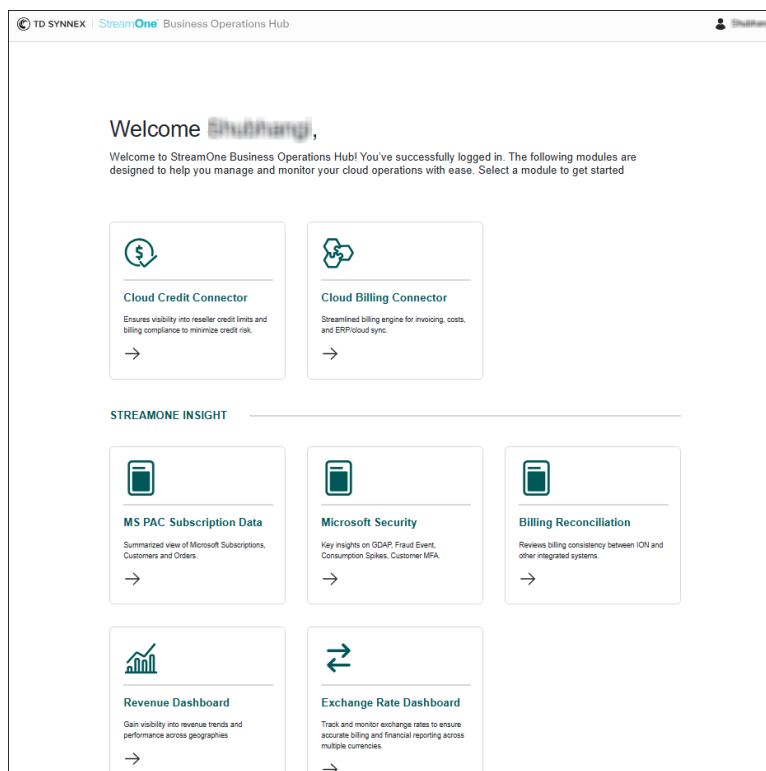

Environment	Web address
PROD	https://streamone-hub.tdsynnex.org

Sign in to the Cloud Billing Connector dashboard

To sign in to the CBC dashboard, perform the following steps.

1. In the browser, enter <https://streamone-hub.tdsynnex.org>.

The **StreamOne Business Operations Hub** page is displayed.

- Click the **Cloud Billing Connector** tile on the StreamOne Hub page.

The CBC dashboard is displayed.

LN	Ord Date	Ord #	Ctr	Cur	Total VC	Total RP	RES ID	RES Name	EUC Name	Consolidations	Invoice Id	ERP Invoice Id	Actions
100	12/11/2025 03:22:33	S413848734	France-NSAP6.7	USD	91,514.57	91,514.57	753104	Next Data France Service		SC	228028 (7345)		[X] [✓] [⋮]
22	12/11/2025 03:22:33	S413848735	France-NSAP6.7	USD	28,454.81	28,454.81	753104	Next Data France Service		SC	228028 (7345)		[X] [✓] [⋮]

Note:

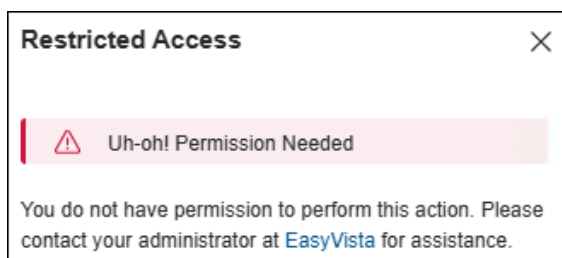

- When you log in to the CBC dashboard, by default, data for the current login date is displayed. To view data for other dates, select the required date range in the **Date** field.
- If the screen displays no matching data found, refresh the page or select the required date range again.

- In the **Date** fields, select the required date range, and then click the refresh  icon.

The billing order data is displayed, for the selected date range.

Note: When you click the **Cloud Billing Connector** tile, if you do not have the required permissions, the **Restricted Access** dialog box is displayed along with a link that navigates to a document on how to create an EasyVista ticket. The error message varies according to the permissions. After ticket approved and access is granted, user will be able to view CBC landing page.

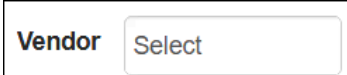

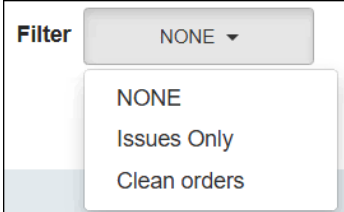

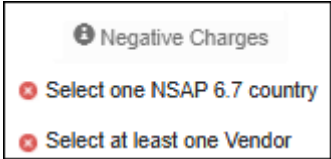

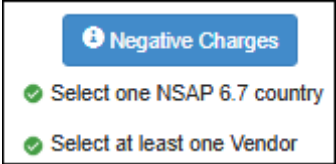

Viewing components of the CBC dashboard

The CBC dashboard includes various filters that help to filter the billing statements as required.

You can view the billing statements from the StreamOne Ion application for the current date.

The following table includes various filters available on the CBC dashboard.

Filter	Image	Description
Date		Period of the billing statements. The dashboard displays the billing statements from the StreamOne Ion platform, for the selected duration. To view billing statements, after signing in to the CBC application. Select the date range in the Date field, and then click the Refresh  button. Note: By default, the current system date is displayed.
Country		The billing statements according to the country or region for which you want to view the billing statements, such as India- SAP 6.8-Prod-SAP 6.8 APJ, Vietnam - SAP 6.8-Prod-SAP 6.8 APJ, and so on. Note: A country or region includes a specific ERP such as NSAP 6.7 and CIS.
Vendor		The billing statements according to the vendor such as Amazon, Acronis, and includes independent options for Microsoft All, Microsoft Legacy, and Microsoft NCE.
Filter		• None: Displays all billing records, regardless of their validation status. • Issues Only: Displays billing records that have billing issues or discrepancies in red state and cannot be approved. Note: The billing statements that cannot be approved are displayed in red state, on the CBC dashboard. To view the error details, click the Issues icon  for the corresponding line item. • Clean Orders: Displays error free billing records that are ready for invoicing.
Show Approvable Orders		Turning on the Show Approvable Orders toggle button, displays the approvable orders on the CBC dashboard. Note: This toggle button is displayed when you select the <i>Clean Orders</i> option from the Filter drop-down.

Filter	Image	Description
Search		The billing statements according to parameters such as <i>Invoice ID</i>, <i>Reseller (RES) Name</i>, and so on. For example, to filter the billing statements according to the reseller name, in the Search field, type the name of the reseller, and click the Refresh  button. Note: It is not a unique search. If you search for a keyword, all the instances are highlighted.
Negative Charges		Negative charges indicate a credit, refund, or adjustment from the cloud provider. - To view negative charges, in the Country field, select an NSAP 6.7 country. - In the Vendor field, select vendor. After selecting a country and a vendor, the Negative Charges button becomes active.  - To download the file and view data, click Negative Charges . The file is downloaded.

The following table includes various tabs available on the CBC dashboard.

Tab name	Description
Billing List	Displays all billing records retrieved from StreamOne ION, for the selected period.
Processed	Displays billing records that have been successfully processed and sent for invoicing.
Declined	Displays billing records that failed during processing, due to errors or validation issues such as incorrect data, missing fields, or mismatched subscription details.

Managing approvals

Billing operations team evaluate the billing statements received from the StreamOne Ion platform and verify details such as reseller name, end customer name, cost, price, and consolidation, and then decide whether to approve or decline billing statements.

Billing operations team can approve the billing statements in the following ways:

- Line-level approvals
- Multiple selection approvals

Line-level approvals

You can approve the billing orders at the line-level.

Approval Type	Description
Approve 6.7	Go to a NSAP Order that you want to approve and click the Approve button. The order is approved.
Approve 6.8	- Go to a APJ Order that you want to approve and click the Approve button. A message is displayed to enter the Service Order ID. Service Order ID Enter Service Order ID or proceed without. ☐ Proceed without Service Order ID ☒ Enter Service Order ID Service Order ID: This is a required field Cancel Proceed - Enter the service order ID and click Proceed. The billing statement is approved, and after it is processed, the file is available in the file storage location. Successfully approved. Once it is processed, the file will be available in File Storage Location.

Approval Type	Description
	Note: - You can also select <i>Proceed without Service Order ID</i> option and click Proceed. - If you select multiple regions of 6.8 and try to approve, an error message is displayed specifying that the selected orders must be from the same region. The service order number is the monthly order ID, which refreshes every month. It is a unique ID for each country per month and does not follow a specific sequence. For example: - AU – 607590 - IN – 607574 - ID – 607602 - VN – 607585 Note: These IDs change every month.
Approve CIS	Go to a CIS order that you want to approve and click the Approve  button. The order is approved.
Approve StarSoft	Go to a StarSoft order that you want to approve and click the Approve  button. The order is approved.
Decline	Go to the line item that you want to decline and click the Decline  button. In CBC, the order remains blocked for further action.

Multiple selection approvals

This section includes information about approving multiple billing statements at a time.

Note: A maximum of 500 records are displayed on a page. You can approve a maximum of 500 records at a time.

Approval Type	Description
Approve Selected	- Select the check boxes next to the billing statements that you want to approve and click Approve Selected. A confirmation message is displayed. int-streamone-hub.tdsynnex.org says Are you sure you want to approve all of the selected orders? OK Cancel - To approve, click OK. Note: You can approve only clean orders. Orders with red state or issues cannot be approved.
Decline Selected	- Select the check boxes next to the billing statements that you want to decline and click Decline Selected. A confirmation message is displayed. int-streamone-hub.tdsynnex.org says Are you sure you want to decline all of the selected orders? OK Cancel - To decline, click OK. Note: You can decline only clean orders. Orders with red state or issues cannot be declined.
Approve Page	- In the Country drop-down, select an ERP and click Refresh . You can select multiple countries with the same ERP and region. The CBC dashboard displays all the billing statements for the selected countries. - Click Approve Page. A confirmation message is displayed. int-streamone-hub.tdsynnex.org says This action will approve 4 actionable orders. Are you sure you want to continue? OK Cancel

Approval Type	Description
	3. To approve, click OK. All billing orders on the page are approved. Note: If you select multiple countries with different ERPs and regions, the following message is displayed. EBC is not be able to approve and process ERP from different region in a single batch. Please select country with same ERP and region. ×

Managing CSV downloads

You can export the CBC dashboard details to a CSV file. This section includes the following topics:

- [Logic](#)
- [Displayed columns page level](#)
- [Displayed columns at the line level](#)

Logic

The CBC dashboard displays results according to the filters that you apply. While exporting to a CSV file, the data reflects the selected filters, but the CSV also includes additional columns with fields sourced from StreamOne Ion.

Displayed columns page level

The CSV file includes columns such as OrderHeaderID, OrderMessageReceiveDate, OrderDate, OrderNumber, CountryCode, and so on.

- To generate the CSV report on the CBC page level, click the

CSV Download

 button. The file is downloaded in the **Downloads** folder of your computer.

OrderHeaderID	OrderMessageReceiveDate	OrderDate	OrderNumber	CountryCode	CurrencyCode	ResellerID	ResellerName	EndUserC	Approved	Declined	ApprovalID	LineCount	Actionable
9719367	2025-12-11	2025-12-11	S4201657	43	USD	1000219	SPRINT (US)ARTIS		FALSE	TRUE	null	5	FALSE

< >

BillingConsoleExport

+

Displayed columns at the line level

The CSV file includes columns such as Invoice ID, LineNumber, Product Description, Vendor Product ID, Collection SKU, and so on.

- To generate the CSV report at the line level, in the **Billing List** tab, under **Actions** column, click the three-dots  button and then click .

The file is downloaded to the **Downloads** folder of your computer.

Order Limit

Using the order limit feature, you can configure order limits per country per day, and also configure the **total** order limit per day for all countries within the EMEA region.

This feature allows the business team to set daily or monthly order limits for each country or region.

Note: You can configure the order limit from the database and modify it according to the business requirements.

Managing order limits

This section includes information about the order limit of 10k per day configured at the country level and the total order limit of 50k per day for all countries within the EMEA region.

After the Operations team in the EMEA region approves the orders in CBC, they are sent to NSAP. These ERPs can process a maximum of 50,000 orders in a day. The order limit feature ensures smooth and efficient processing of billing orders within the EMEA region, where downstream systems have a strict capacity constraint of handling not more than 10K orders per day.

Setting daily order limits for each country, and a total daily order limit across all countries within the EMEA region, provides the following advantages:

- Prevents overload of downstream systems.
- Avoids delays in order approvals and processing.
- Ensures timely billing.
- Maintains operational efficiency.

This proactive mechanism aligns order flow with the system capacity, reduces manual intervention, and provides a more reliable and scalable billing process.

This section includes the following topics.

- [Managing order limit 10 K | country limit](#)
- [Managing order limit 50 K | region limit](#)
- [Managing spilled over orders](#)

Managing order limit 10 K | country limit

For each country the ERP country wise limit, in the database- is configured as 10K per day. This value is configurable. The order limit of 10 K is applicable only for EMEA countries. This order limit can be used with other ERPs, but other ERPs currently do not use it.

Example 1: If there are 15K United Kingdom orders, only 10K orders are sent for approval to SAP/NSAP in a day. The remaining 5K orders will be added to the queue and sent to SAP/ NSAP on the next day.

In the following image, the orders are sent to SAP/NSAP according to the 10K order limit.

The screenshot displays the SQL Server Enterprise Manager interface. The Object Explorer on the left shows the database structure. The central pane shows a SQL query being executed. The results pane at the bottom shows a table with the following data:

	CountryCode	Dailycount	Erporderlimit	name
1	0010	0	1000	AT
2	0011	0	1000	CH
3	0012	0	1000	BE
4	0014	3	10000	GB
5	0018	1	1000	NL
6	0019	1	1000	FI
7	0022	0	1000	SE
8	0023	0	1000	DK
9	0024	0	1000	NO
10	0026	0	1000	PL

The orders from the same invoice ids are processed together on the next day.

Example 2: For France, if 9800 orders are already sent to SAP/NSAP, the limit remaining per day is 200 orders. We have the capacity to send 200 additional orders. However, for the End Customer Consolidated invoices, even if 300 orders are approved in CBC, we cannot split them as 200 and 100, this means we cannot send 200 today and 100 orders on the next day. The 300 orders must be queued and sent to SAP/NSAP on the next day.

Example 3: For UK, if in this example 10500 orders are approved in CBC, only 9994 orders move to state 8 (state 8 indicates that the order is successfully sent to ERP) and are sent to SAP/NSAP. In this example, we still have a capacity for 6 orders, as the order limit is configured as 10K per day per country. However, these 6 orders have a different invoice Id compared to the 9994 orders that have moved to state 8. So, these 6 orders must be queued, and sent to SAP/NSAP on the next day.

Query executed successfully.

Query executed successfully.

Managing order limit 50 K | region limit

The total order limit is configured as 50K per day for all countries in the EMEA region.

For example, in France and UK, the total order limit must be less than or equal to 50K, the orders exceeding 50K are added to the queue and sent for approval to SAP/ NSAP on the next day.

Consider a scenario where the per day limit is 10K; France has 45K orders, and UK has 15K orders. Here the total number of orders exceeds 50K. In this scenario, 10K France orders and 10K UK orders are sent for approval to SAP/NSAP on the same day; the remaining 30K orders will be added to the queue and sent for approval to SAP/ NSAP, on the next day.

Managing spilled over orders

According to the database configuration, while processing orders, the spilled over orders from the previous day are given priority over the orders from the current day.

Before sending orders to SAP/NSAP, the approval date and time are considered.

For example, consider a scenario where there are four countries from the EMEA region:

Day 1 orders

France -10K
UK-10K
Portugal-10K
Italy-25K

The total number of orders from the four countries is 55K and the region level limit is 50K. In this case, the total exceeds the order limit of the region level. So, the remaining 5K orders of Italy are added to the queue and sent for approval to SAP/ NSAP on the next day (day 2).

On the next day, the 5K Italy orders are given priority over any new orders of that day.

Day 2 Orders

On day 2, the spilled over 5K Italy orders from the previous day and additional set of new orders for day 2 processing, within the 50K limit, will be added to the queue and sent to SAP/ NSAP. Likewise, orders exceeding the 50K limit will be given priority on the third day.

Day 3 Orders

On day 3, the day 2 queued (spilled over) orders and additional set of orders to be processed on day 3 within the 50K limit are added to the queue and sent to SAP/ NSAP. The orders exceeding the 50K limit from day 3, will be given priority on the fourth day and so on.

Viewing Order Status

The purpose of the Order status in the Cloud Billing Connector is to provide visibility and management of billing orders throughout their lifecycle. This includes tracking the status of orders from approval to invoice creation, identifying potential issues early in the process, enabling prompt responses to any discrepancies or problems, and streamlining the billing process by ensuring accurate and timely invoicing.

The Operations team approves billing orders in the CBC UI, which are sent to the configured ERPs - NSAP, CIS, StarSoft, and SAP 6.8 for the respective countries. Previously, there was no visibility into the status of these orders from the time they were approved until the invoice was created in the ERP. This new feature addresses that gap by providing the Billing Operations team with visibility into the various statuses, enabling them to identify potential issues and respond promptly.

This section includes the status of billing orders at various stages within the CBC system including in progress, completed, and so on.

The following table provides the details of order statuses.

Status	Status Description
In Progress	Provides a workflow within CBC, before the order is sent to the ERP.
Order Created	Confirms that an order is being created on the ERP.
Completed	Specifies that an invoice is created with an ERP Invoice ID, in the corresponding column.
Error	Indicates that the order has failed.
Cancelled	Indicates that the order was cancelled on the ERP.
EBC Complete	Indicates that the order is approved in CBC and is successfully sent to ERP.

Note:

- In the CBC UI, the **Status** column displays all these statuses. The details of each status are displayed on the **Status Information** pop-up, only when you click the specific status.
- The **EBC Complete** status is applicable for the ERPs of StarSoft and SAP 6.8.

This section includes the following topics.

- [Viewing the Order Status for NSAP | In Progress](#)
- [Viewing the Order Status for NSAP | Order Created](#)
- [Viewing the Order Status for NSAP | Completed](#)
- [Viewing the Order Status for NSAP | Error](#)

- [Viewing the Order Status for NSAP | Cancelled](#)
- [Viewing the Order Status for CIS | In Progress](#)
- [Viewing the Order Status for CIS | Order Created](#)
- [Viewing the Order Status for CIS | Completed](#)
- [Viewing the Order Status for CIS | Error](#)
- [Viewing the Order Status for StarSoft | EBC Complete](#)
- [Viewing the Order Status for SAP 6.8 | EBC Complete](#)

To view the order status, perform the following steps.

1. On the CBC dashbaord, in the **Date** fields, select the required date range, and then click the refresh  icon.
2. Click the **Processed** tab.
The order status is displayed.

The **Processed** tab displays the **Status** column with various statuses such as *In Progress*, *Error*, *Completed*, *Order Created*, and so on.

Viewing the Order Status for NSAP | In Progress

To view the 'In progress' order status for NSAP, perform the following steps.

1. In the **Country** filter type *Denmark* search for NSAP 6.7, in the **Date** field, select the required date range, and then click the refresh  icon.

- Click the **Processed** tab.
The CBC UI displays the data for the selected country.

Viewing the status table for the ERP system

The following table includes the status for the ERP system.

CBC Status	ERP	Status Information	Description
In Progress	Applicable for NSAP and CIS	Pre-ERP ReadyToQueue	Order is approved in CBC.
In Progress	Applicable for NSAP and CIS	ERP MiddleWare Received (positive flow)	Order is sent from CBC.
Error	Applicable for NSAP and CIS	Pre-ERP Failed (negative flow)	Order is failed due to technical reason.
Error	NSAP	ERP Queued/Failed	
Order Created	NSAP	ERP Order On Hold	Order is not invoiced completely due to discrepancy in order details.
Order Created	NSAP	ERP Order Received Queued For Invoice	Order is received on the ERP but not invoiced.
Completed	NSAP	ERP Order Invoiced	Order is complete and invoiced.
In Progress	CIS	ERP MiddleWare Received No Order Created (Batch Created)	Order has failed in CIS, but batch is created.
In Progress	CIS	Pre-ERP QueuedForProcessing (limit exceeds)	Order limit exceeds, some orders are sent for processing later.
Order Created	CIS	ERP Order Received Queued For Invoice Order Created (Queued, Not Invoiced)	Order is queued to be invoiced.
Completed	CIS	ERP Order Invoiced Order Created (Invoiced)	Order is invoiced successfully.

CBC Status	ERP	Status Information	Description
Error	CIS	Pre- ERP Failed No Order Created (No Batch Created)	Order is received by CIS, but no batch is created.
EBC Complete	StarSoft	NA	Order is approved in CBC, and successfully sent to ERP.
EBC Complete	SAP 6.8	NA	Order is approved in CBC; a file is generated in (blob storage).

Consolidation per vendor

Using the consolidation feature, you can configure the default consolidation type in the backend for various vendors such as IBM, Acronis, Microsoft. Operations can establish a table in the backend specifying which vendors can have a fixed consolidation type in a country.

Note: The backend consolidation type of a vendor from a region overrides the consolidation type updated at the reseller profile level.

This section includes information about the consolidation types that are set in the default consolidation recommendation table, for various vendors.

The invoice consolidation such as Fully Consolidated, Semi Consolidated, End Customer Consolidated, is a value that is set up in the SION platform at the reseller-profile level and is sent to CBC through the APIs as a custom field. This configuration is valid only for some vendors. Other configurations are integrated with vendors in a way that does not allow a consolidation selection, and the consolidation must be set up at the vendor level for all resellers in a specific country.

Managing consolidation types

The Billing Consolidation includes Fully Consolidated, Semi Consolidated, and End Customer Consolidated. Using these options, you can select the level of detail to view on the invoices. The following consolidation types are available:

Fully Consolidated (FC): In FC, only one order gets generated. Even if there are multiple subscription Ids under one collection SKU, only one line(line item) is generated. Full aggregation of charges are done typically by the Cloud Provider or Product Line at the Collection SKU level without End Customer or Subscription details.

Semi Consolidated (SC): In SC, a bifurcation happens on the basis of Subscription Id, irrespective of the collection SKU.

This includes one invoice per reseller with Subscription SKU level consolidation. This is an aggregation of charges on the same invoice by Subscription, organized by the end user. Included SC at the line level: Original SCM SO and Original SCM PO (if the original order comes from SCM), End User PO (if information is available in SCM), End User, Tenant, Subscription ID, Charges details, Commitment terms, Billing Frequency and link to the Billing Statement in StreamOne Ion.

End Customer Consolidated (EC): In EC, a bifurcation happens based on the end customer, irrespective of the subscription Id.

This includes one invoice per end customer, with Subscription SKU level consolidation. This is an aggregation of charges on the same invoice by Subscription, organized by the end user. Included at the line level: End User PO, End User, Tenant, Subscription ID, Charges details Commitment terms, Billing Frequency and link to the Billing Statement in StreamOne Ion.

Managing default consolidation at vendor level

Consolidation types are configured for specific vendors in the SIE API configuration (CBC) table and the consolidation type is always taken from the CBC table for these vendors.

The following table includes vendors along with the default consolidation type recommendation.

Vendor	Default consolidation recommendation
Sophos	SC
IBM	SC
Acronis	SC
BitTitan	NA
AvePoint	SC

Vendor	Default consolidation recommendation
Microsoft	NA
Google	NA

For vendors such as Sophos, IBM, Acronis, and AvePoint, the default consolidation type is set to Semi Consolidated, which is configured from the SIE API Configuration (CBC) table.

For these vendors, in the SION platform, under reseller profile, in Custom Fields, under Consolidation Type, if you set another consolidation type such as EC or leave it blank, the setting is overridden by the consolidation type specified in the SIE API Configuration (CBC) table. This ensures that the default consolidation type that is configured in the backend (Semi Consolidated), is consistently applied for these vendors, irrespective of the consolidation type set in the SION platform under Custom Fields.

- For the Sophos vendor in the SION platform, under the Reseller profile, in Custom Fields, the consolidation type is **End Customer Consolidated (EC)**.

Custom Fields	
Accounts (ResellerID)	Accounts (ResellerID)
Consolidation Type	Custom
Google (ResellerID)	Google (ResellerID)
Microsoft (ResellerID)	Microsoft (ResellerID)
MS, Microsoft	MS, Microsoft

- The consolidation type for the Sophos vendor on the CBC dashboard, in the **Billing List** tab, under the **Consolidations** column is **Semi Consolidated (SC)**. This is the default consolidation type configured in the backend according to the SIE API Configuration (CBC) table.

Line #	TD SKU	Qty	Vendor Name	Purchase Currency	VND Unit Cost	VND Total Cost	RES Unit Price	RES Total Price	Subscription ID	Invoice Text						
10	8388177	1	sophos	N/A	12.28	12.28	13.64	13.64	76100521-e777-4a67-8330-e178a6d89867	End User: Lemongate Monthly SubscriptionID: 76100521-e777-4a67-8330-e178a6d89867						

Note:

- This consolidation type applies to all ERPs.

- On the CBC dashboard, on the **Processed** tab, the **Consolidations** column displays the consolidation type as **Semi Consolidated (SC)**, for the Sophos, IBM, Acronis, and AvePoint vendors.
- The consolidation type is not applicable for the **BitTitan** vendor; it has a special consolidation, does not follow these rules and will be displayed as **NA** on the CBC dashboard.

Managing consolidation at reseller profile level

For the Google and Microsoft vendors, the default consolidation recommendation type is set to NA, which is configured in the backend from the SIE API Configuration (CBC) table.

For these vendors, the consolidation type is taken from the SION platform, under the Reseller profile, in Custom Fields. For example, if the consolidation type set in the Custom Fields, under the Consolidation Type is Fully Consolidated, the same consolidation type is displayed on the CBC dashboard, in the **Billing List** tab, under the **Consolidations** column. This confirms that the consolidation type configured on the SION platform, in Custom Fields is applied for these vendors.

- For the Google vendor on the SION platform, under reseller profile, in the Custom Fields, under Consolidation Type, the consolidation type is set as **End User Consolidated (EC)**.

- The consolidation type for the Google vendor on the CBC dashboard, in the **Billing List** tab, under the **Consolidations** column, is **End Customer Consolidated (EC)**.

Accessing BitTitan invoice details

This section provides detailed information about the BitTitan vendor, when used as a one-time vendor by TD SYNEX. It also includes invoicing details when TD SYNEX and its partners purchase one-time products through the StreamOne Ion platform.

Here, BitTitan is a one-time vendor, with the consolidation type set to NA and the order is automatically approved in the Cloud Billing Connector (CBC) user interface. The Cloud Billing Connector manages the billing by sending a billing order including the TD purchase order to the ERP system (NSAP 6.7) on the same day.

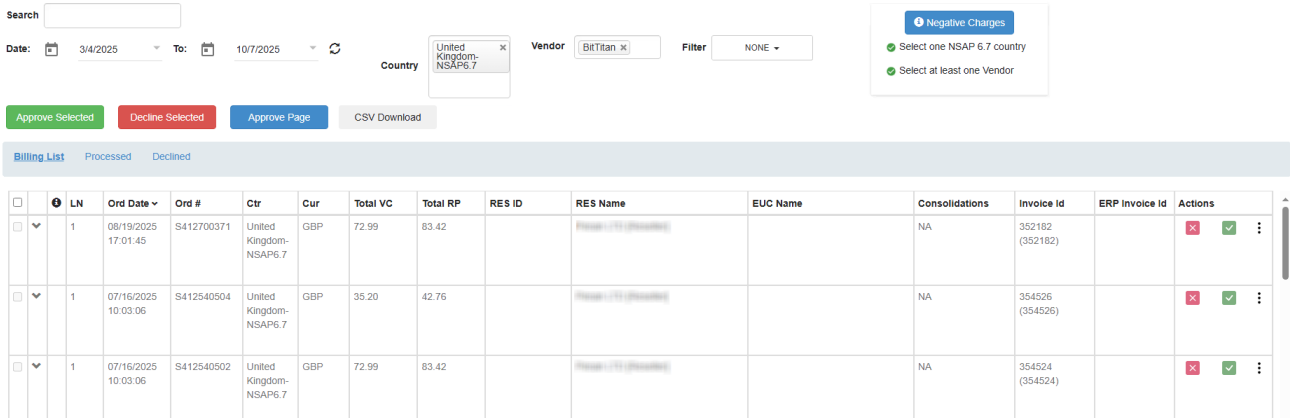

Purpose and Benefits:

- Ensures timely and accurate invoicing.
- Ensures immediate processing of billing orders.
- Provides traceability of transactions using the **ST9** series, followed by the PO number **ST9<PO#>**.
- Streamlines financial operations between TD SYNEX, partners, and ERP systems.

To access the invoice text data for the BitTitan vendor, perform the following steps.

1. To access the invoice text data for the BitTitan vendor, on the CBC dashboard, in the **Vendor** field, search for the BitTitan vendor.
2. In the **Date** fields, select the required date range, and then click the refresh  icon.

The billing order data is displayed.

Subscription ID	Cloud account number.
Order Key	Order number in StreamOne ION.
End User PO	Purchase order number provided by the end customer.

Viewing BitTitan NSAP billing flow

The billing flow for the BitTitan vendor is as follows.

1. A reseller places a BitTitan order in StreamOne Ion (SION).
2. A dummy order is generated and is sent to Cloud Credit Connector.
3. After the order is credit-checked and approved in Cloud Credit Connector, SION sends a provisioning request to BitTitan for including ST PO and ensures that this data is available in the Subscription API.
4. BitTitan sends a response to SION specifying the coupon details.
5. SION generates a Billing Report on the same day, specifying these details.

6. CBC retrieves BitTitan billing details from the Billing Report API.
7. To obtain invoice details such as TD PO, Order ID, and so on, call the V1 siecloud account API, and verify if the subscription is present in the stage invoice line table.
8. CBC retrieves the order details from the V3 Subscription APIs, analyzes the available data and then implements it.
9. After invoices are generated, the system imports data into CBC three times a day, at 07:30 IST, 15:30 IST, and 00:30 IST (next day).
10. After the data is retrieved from the V3 Subscription APIs, the subscription data and customer data are saved in the siestaging cloud account table.
11. CBC verifies if the reseller ID is present. If it is unavailable, the data is fetched from Cloud Credit Connector.
12. If the required information is correct, the BitTitan data is saved in the CBC Staging environment.
13. As the approval type for BitTitan is set as *auto-approved*, Cloud Billing Connector automatically approves the order for the BitTitan vendor.
14. After the order is approved, the Purchase Order (PO) is sent to NSAP and an IDoc (intermediate document) is created.
15. The response returns the Purchase Requisition (PR) number to CBC.
16. The PO that is created with IDoc is sent to NSAP along with the ST PO number.
17. NSAP updates the PO details and initiates invoice creation.
18. The Cloud Billing Connector displays the ERP invoice details and TP PO column details on the UI.

Viewing invoice text changes

This feature describes invoice text changes and additional line items added in the invoice text in Credit Billing Connector (CBC), for the SaaS and Microsoft vendors. This feature ensures improved clarity, consistency, and compliance across Fully Consolidated (FC), Semi-Consolidated (SC), and End Customer Consolidated (EC) billing formats.

To better support TD SYNnex billing operation teams and resellers who rely on precise invoice data for downstream billing, this invoice text change introduces a significant enhancement to the Cloud Billing Connector (CBC). It allows the inclusion of vendor-specific details at the invoice line-item level.

This section includes detailed information about the additional line items included in the CBC invoice text, for Microsoft vendors and SaaS vendors such as Acronis, AvePoint, Sophos, IBM, and so on. The invoice text information varies according to the vendor .

This feature includes a standard template for new vendors, ensuring consistency and reducing onboarding time.

Standardized invoice text format across various vendors helps in:

- Synchronizing invoice data
- Improving clarity in invoice data
- Maintaining consistent structure across all vendor billing
- Maintaining accuracy in both EC-consolidated and SC-consolidated billing formats.

This update streamlines billing workflows and enhances the reliability of the data that is used in downstream invoicing and reporting processes.

This section includes the following topics.

- [Managing invoice text changes per vendor | Acronis](#)
- [Managing invoice text change per vendor | AvePoint](#)
- [Managing invoice text changes per vendor | Sophos](#)
- [Managing invoice text change per vendor | GWS](#)
- [Managing invoice text changes per vendor | GCP](#)
- [Managing invoice text changes per vendor | IBM](#)
- [Managing invoice text changes per vendor | Microsoft](#)

Managing invoice text changes per vendor | Acronis

For the Acronis vendor, according to the invoice text changes, the FC billing format includes Billing Period at the top of the invoice text line item and the billing statement link. In the invoice text, the Quantity field detail is obtained from the source V3 report API. Other field details are obtained from the source V1 report API.

The following table includes the fields of invoice text line items. These fields are specified in the FC billing format for the Acronis vendor.

Fields	Invoice text line items
Billing Period	Billing dd/mm/yyyy
Follow link to See Billing Statement ID	Billing statement link

The following table includes the fields of invoice text line items. These fields are specified in the SC and EC billing formats for the Acronis vendor.

Fields	Invoice text line items
Billing Period	Billing dd/mm/yyyy
Original StreamOne Order	This field is not displayed.
Your Purchase Order	Reseller PO
End User PO	End customer PO
End User	Company
Subscription ID	Cloud account number
Tenant	These fields are not displayed.
MFPN#	
Billing Frequency	
Commitment Term	
Quantity	Order quantity
Charges history	This field is not displayed.
Unit price	Sales price of unit
Follow link to See Billing Statement ID	Billing statement link

- Subscription ID, End User, End User PO maintain the existing fields without any modifications to the invoice text.
- Original StreamOne Order, Tenant, MFPN#, Billing Frequency, Commitment Term, and Charge history are vendor specific fields and are displayed in the invoice text, only if relevant data is available.

Note:

- The end customer purchase order is displayed in the invoice text, only if the **End User PO** field is updated while placing the order from the SION platform.
 - The **Reseller PO** detail is displayed in the invoice text, only if it is available on the SION platform.
 - Invoice text changes are not applicable for the **BitTitan** vendor; they remain unchanged for this vendor.
1. To view the invoice text data, in the CBC dashboard, in the **Vendor** field, search for the Acronis vendor. In the **Date** fields, select the required date range, and then click the refresh  icon.

The billing order data is displayed.

The **Invoice Text** column displays following line items:

- **Billing Period:** Specifies start and end dates of the charge.
- **End User:** Specifies end user details such as name, address, and so on.
- **SubscriptionID:** Specifies the subscription Id.
- **Quantity:** Specifies the order quantity.
- **Follow link to See Billing Statement ID:** Specifies the billing statement link.

Managing invoice text change per vendor | AvePoint

For the AvePoint vendor, according to the invoice text changes, the FC billing formats include Billing Period at the top in the invoice text line item and the billing statement link. In the invoice text, the Billing Period and Quantity fields' details are obtained from the source V3 report API and other field details are obtained from the source V1 report API.

The following table includes the fields of invoice text line items. These fields are specified in the FC billing format for the AvePoint vendor.

Fields	Invoice text line items
Billing Period	Billing dd/mm/yyyy
Follow link to See Billing Statement ID	Billing statement link

The following table includes the fields of invoice text line items. These fields are specified in the SC and EC billing formats for the AvePoint vendor.

Fields	Invoice text line items
Billing Period	Billing dd/mm/yyyy
Original StreamOne Order	This field is not displayed.
Your Purchase Order	Reseller PO
End User PO	End customer PO
End User	Company
Subscription ID	Cloud account number
Tenant	These fields are not displayed.
MFPN#	
Billing Frequency	
Commitment Term	
Quantity	
Charges history	
Unit price	
Follow link to See Billing Statement ID	Billing statement link

- Subscription ID, End User, End User PO maintain the existing fields without any modifications to the invoice text.
- Original StreamOne Order, Tenant, MFPN#, Billing Frequency, Commitment Term, and Charge history are vendor specific fields and are displayed in invoice text, only if relevant data is available.

Note:

- The end customer purchase order is displayed in the invoice text, only if the End User PO field is updated while placing the order from the SION platform.
 - The **Reseller PO** detail is displayed in the invoice text, only if it is available on the SION platform.
1. To view the invoice text data, in the CBC dashboard, in the **Vendor** field, search for the AvePoint vendor. In the **Date** fields, select the required date range, and then click the refresh  icon.

The billing order data is displayed.

The **Invoice Text** column for SC and EC displays following line items:

- **Billing Period:** Specifies start and end dates of the charge.
- **End User:** Specifies end user details such as name, address, and so on.
- **SubscriptionID:** Specifies the subscription Id.
- **Follow link to See Billing Statement ID:** Specifies the billing statement link.

Managing invoice text changes per vendor | IBM

For the IBM vendor, the FC billing format includes Billing Period at the top of the invoice text line item and includes the billing statement link.

The following table includes the fields of invoice text line items. These fields are specified in the FC billing for the IBM vendor.

Fields	Invoice text line items
Billing Period	Billing date/month/year
Follow link to See Billing Statement ID	Billing statement link

The following table includes the fields of the invoice text line items. These fields are specified in the SC and EC billing formats for the IBM vendor.

Fields	Invoice text line items
Billing Period	Billing date/month/year
Original StreamOne Order	Purchase order ID
Your Purchase Order	Reseller PO
End User PO	End customer PO
End User	Company
Subscription ID	Cloud account number
Tenant	This field is not displayed.
MFPN#	Manufacturer's part number
Billing Frequency	Billing frequency against subscription
Commitment Term	Duration agreed for a subscription
Quantity	Order quantity
Charges history	This field is not displayed.
Unit price	Sales price of the unit
Follow link to See Billing Statement ID	Billing statement link

- Subscription ID, End User, and End User PO maintain the existing fields without any modifications to the invoice text.
- Original StreamOne Order, Tenant, MFPN#, Billing Frequency, Commitment Term, and Charge history are vendor specific fields and displayed in the invoice text, only if relevant data is available.

Note:

- The end customer purchase order is displayed in the invoice text, only if the **End User PO** field is updated while placing the order from the SION platform.
- The **Reseller PO** detail is displayed in the invoice text, only if it is available on the SION platform.

Managing invoice text changes per vendor | Microsoft

For the Microsoft vendor, the FC billing format includes Billing Period at the top in the invoice text line item and the billing statement link. In the invoice text, the Tenant, Charge History, Billing Frequency, MFPN, and Quantity fields details are obtained from the source V3 report API and other applicable field details are obtained from the source V1 report API.

The following table includes the fields of invoice text line items. These fields are specified in the FC billing format for the Microsoft vendor.

Fields	Invoice text line items
Billing Period	Billing dd/mm/yyyy
Follow link to See Billing Statement ID	Billing statement link

The following table includes the fields of invoice text line items. These fields are specified in the SC and EC billing formats for the Microsoft vendor.

Fields	Invoice text line items
Billing Period	Billing dd/mm/yyyy
Original StreamOne Order	Purchase order Id
Your Purchase Order	Reseller PO
End User PO	End customer PO
End User	Company
Subscription ID	Cloud account number
Tenant	Domain name
MFPN#	Offer ID (License)
Billing Frequency	Billing Frequency: Annual/ Monthly
Commitment Term	Commitment Term: Annual/ Monthly
Quantity	NA as a separate field comes with Charge History
Charges history	History of charges applied for a subscription
Unit price	NA as a separate field comes with Charge History

Fields	Invoice text line items
Follow link to See Billing Statement ID	Billing statement link

- To view the invoice text data, in the CBC dashboard, in the **Vendor** field, search for the Microsoft vendor. In the **Date** fields, select the required date range, and then click the refresh  icon.

The billing order data is displayed.

Viewing StarSoft ERP Integration for LAC Region

This integration strategy of StarSoft ERP with CBC streamlines the billing and data processing workflows across the Latin America and Caribbean (LAC) regions. This feature enhances operational efficiency, reduces manual intervention, and improves data consistency through structured automation and standardized practices.

Purpose:

By establishing clear data processing workflows and innovative accounting metrics, the integration provides leading indicators of success. The reduction in manual tasks and improved data consistency minimizes billing errors and enhances the overall operational efficiency.

Implementation objective:

- Successful API integration between CBC and StarSoft ERP.
- Implementation of error handling mechanisms, including HTTP status codes and validation responses.
- Supports pre-consolidated invoice data and maintains existing StarSoft billing processes.
- Seamless SKU mapping and vendor ID alignment with CIS payload requirements.
- Supports multiple countries and region-based configurations including.
 - Colombia
 - Cala
 - Ecuador
 - Argentina
 - Chile
 - Peru
 - TechData
- Processes Microsoft billing data accurately.

Note:

- The StarSoft payload is similar to the CIS payload, and additionally includes newly added fields such as MS Invoice ID, Subscription Start and End dates.
- The SAP ID is used as the StarSoft ID.
- The CIS ID field must be blank for keeping the SAP ID effective.
- Consolidations in scope – SC, EC, FC is out of scope.

Viewing Order details | StarSoft ERP

On the CBC dashboard, you can view order details for the StarSoft ERP, such as Product Description, Vendor Product ID, Collection SKU, and so on.

To view the order details of the StarSoft ERP, perform the following steps.

1. On the CBC dashboard, in the **Date** field, select the required date range.
2. In the **Country** field, select *TD SYNEX Cala Inc- StarSoft App*.
3. In the **Vendor** field, select the *Microsoft All*, and then click the refresh  icon.

The billing order is displayed.

Viewing the collection SKU mapping

The Collection SKU Mapping feature is a utility within the Cloud Billing Connector that ensures that the vendor-provided SKUs from the Cloud and Catalog Product Management (CCPM) teams are correctly mapped to internal product descriptions and billing structures. This mapping is critical for error-free order processing and accurate billing. Incorrect or missing mappings lead to missing SKU errors, which can block orders from progressing.

This section includes detailed information about the Collection SKU Mapping feature in Cloud Billing Connector, includes the purpose, workflow, and best practices for accurate SKU alignment.

It outlines how Cloud and Catalog Product Management (CCPM) teams supply vendor SKUs, and how the mapping utility ensures that these SKUs are correctly linked to the product descriptions, preventing order failures and billing errors.

It includes step-by-step instructions, error handling details, and integration points with CBC, helping teams understand why mapping errors occur and how to resolve them effectively.

Using this feature users can streamline SKU mapping processes, reduce SKU mapping errors in CBC, and seamlessly process orders across multiple vendors.

Key Features:

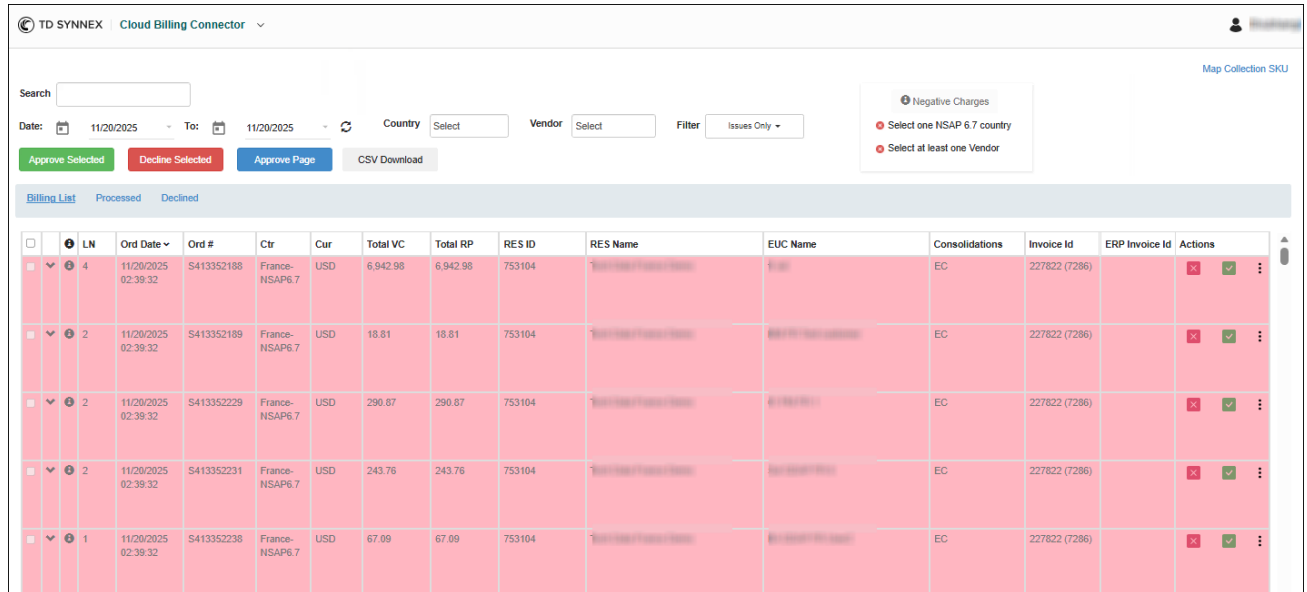

- **SKU Mapping Utility:**
 - Maps vendor SKUs to product descriptions.
- **Error Identification:**
 - Displays subscription lines without issues for SKU that are correctly mapped.
 - Displays the subscription in a red state for missing SKU errors.
- **Integration with Cloud and Catalog Product Management (CCPM) workflow:**
 - Business operation team and Cloud and Catalog Product Management (CCPM) team provides vendor SKU.
 - CBC uses the mapping utility to link SKU to correct products before billing.
- **Validation & Blocking:**
 - Orders with missing SKU errors are blocked until corrections are made.
 - Ensures that only subscriptions without issues move forward for invoicing.

Viewing the UI SKU mapping process

To view the UI SKU mapping process, perform the following.

1. To map collection SKU for UI SKU, on the CBC dashboard, in the **Date** field, select the required date range.
2. In the **Filter** drop-down field, select **Issues Only**, and then click the refresh  icon.

The billing orders that have issues in the red state are displayed.

The screenshot shows the TD SYNEX Cloud Billing Connector interface. At the top, there's a search bar and filters for Date (11/20/2025 to 11/20/2025), Country, Vendor, and Filter (Issues Only). Below the filters are buttons for Approve Selected, Decline Selected, Approve Page, and CSV Download. A warning box for Negative Charges is also present. The main table has columns: LN, Ord Date, Ord #, Ctr, Cur, Total VC, Total RP, RES ID, RES Name, EUC Name, Consolidations, Invoice Id, ERP Invoice Id, and Actions. The table contains five rows of data, all highlighted in red, indicating issues. The Actions column for each row contains a red 'X' icon, a green checkmark icon, and a vertical ellipsis icon.

LN	Ord Date	Ord #	Ctr	Cur	Total VC	Total RP	RES ID	RES Name	EUC Name	Consolidations	Invoice Id	ERP Invoice Id	Actions
4	11/20/2025 02:39:32	S413352188	France-NSAP6.7	USD	6,942.98	6,942.98	753104	1.0000000000000000	1.0000000000000000	EC	227822 (7286)

3. To view the issue details, under the **Billing List** tab, click the Issues  icon next to the corresponding row.

The issue details are displayed.

Issues for Order #: S413352188 Received: 11/20/2025 02:39:32 

- Missing Collection SKU Mapping for one or more lines.

Note:

- Ensure that the SKU ID is available, before mapping the collection SKU.
 - To process orders, the reseller ID and the SKU ID are mandatory.
4. Under the **Billing List** tab, click Show Detail  to view the order details in red state, in the **LN Line Count** column.

The orders in red state are displayed.

- Under the **Line #** column, click the required number to display the product description, SKU data source.

The following screenshot displays the product description in the **Product Description** column and the SKU data source in the **Sku Data Source** column. As the source is UI Sku, you can map the collection SKU from the CBC dashboard.

Invoice ID	Line Number	Product Description	Vendor Product ID	Collection SKU	Vendor Name	Cost	Price	Sku Data Source
1944436	10	User Migration Bundle			BitTitan	10.88	12.57	UI Sku

- To map the SKU data, on the CBC page, at the top-right click **Map Collection SKU**.

The collection SKU page is displayed.

View by ERP:	View by Vendor:	Filter By:	Search Text:		
NSAP6.7	-- Select	-- Select	Search...	Search	Clear
Add New Row Export CSV					
Product Description	Collection Sku SC/EC	Collection Sku FC	Country	Vendor Name	Action
A Microsoft Azure Subscription Request - Provides access to Microsoft Azure Subscription -			All	Microsoft All	☒ ☐
Amazon Elastic File System			All	Amazon	☒ ☐
Azure Monitor - Data Archive			All	Microsoft All	☒ ☐

- In the **View by ERP** field drop-down, select the required ERP.

View by ERP:
NSAP6.7
CIS
NSAP6.7
SAP 6.8 APJ
StarSoftApp

For example, if you are on the CBC page, in the **Ctr** column, ERP is NSAP 6.7, select **NSAP 6.7**.

Note: Ensure that you select the correct ERP.

- In the **View by Vendor** field drop-down, select the required vendor such as Amazon, BitTitan, and so on.

View by Vendor:

BitTitan

▼

-- Select
Acronis
Amazon
AvePoint
BitTitan

For example, if the vendor in the line item is BitTitan, select **BitTitan**.

- In the **Search Text** field, paste a copied description or enter the product description from the line item under the **Product Description** column, and then click **Search**.

View by ERP:	View by Vendor:	Filter By:	Search Text:		
NSAP6.7 ▼	BitTitan ▼	-- Select ▼	User Migration Bundle	Search	Clear

The SKU ID detail field are populated.

The screenshot displays that the SKU ID under the **Collection Sku SC/EC** and **Collection Sku FC** columns is missing.

Add New Row Export CSV					
Product Description	Collection Sku SC/EC	Collection Sku FC	Country	Vendor Name	Action
User Migration Bundle			All ▼	BitTitan ▼	☐ ☐

Note: If the product description does not appear in the search results, click **Add New Row** and enter the product description along with the other required fields.

- To enter the SKU ID, under the **Action** column, click the edit  icon.
- According to the Consolidation type on the CBC page, under **Consolidations** column, enter details in the **Collection Sku SC/EC** column or the **Collection Sku FC** column.

For example, if the consolidation type is EC, you must enter the SKU ID in the **Collection Sku SC/EC** column.

Product Description	Collection Sku SC/EC	Collection Sku FC	Country	Vendor Name	Action
User Migration Bundle	1235		France	BitTitan	 

12. According to the country type on the CBC page, under **Country** column, select the required country.

For example: If the CBC page displays 'France' in the Ctr (Country Code) column, in the **Country** drop-down, select **France**.

Country

France

All
Austria
Belgium
Switzerland
Czech Republic
Germany

Note:

- If SKU IDs are the same for an ERP and multiple countries under that ERP, select **All** from the **Country** drop-down, and enter the common SKU ID.
- In the **Country** drop-down, it is mandatory to select **ALL**, while adding new product description.

13. According to the vendor specified on the CBC page, under the **Vendor Name** column, select the required vendor.

For example: If the CBC page displays 'BitTitan' in the **Ctr** (Country Code) column, in the **Vendor Name** drop-down, select **BitTitan**.

14. After entering the details, click the Save  icon.

- The entry is created in the database with the SKU data source is set to *UI SKU*.
- With Near Real Time (NRT), the import job runs every -15mins. -
- If you map the SKU before importing the order into CBC, CBC automatically applies the SKU during order creation.
- If you map the SKU after the order is already imported into CBC, CBC does not apply the new SKU. You must delete and import the order again to map the SKU correctly.

Viewing the backend SKU mapping process

The backend SKU mapping process is a critical step in ensuring accurate billing and product identification, within the StreamOne ION system.

When the file data is uploaded to the Blob storage, it is processed through a table. During the import job, the system reads this table and automatically selects the appropriate SKU, according to the product category such as License, Marketplace, Perpetual, or Software Subscription. This ensures that each record is correctly mapped to the corresponding SKU, for accurate billing and reporting.

The automated mapping ensures that every item is correctly categorized and associated with the right internal product, resulting in accurate billing, reporting, and invoicing without manual intervention.

To view the SKU data source for the backend SKU, perform the following.

1. On the CBC dashboard, under the **Billing List** tab, click Show Detail .

Billing List

Processed

Declined

☐			LN	Ord Date ▾	Ord #	Ctr	Cur	Total VC	Total RP
☐	▲		5	11/25/2025 10:15:32	S413412107	France- NSAP6.7	EUR	145.17	180.71

Line #	TD	SKU	Qty	Vendor Name	Purchase Currency	VND Unit Cost	VND Total Cost	RES Unit Price	RES Total Price	Subscription ID
10		7881787	1	microsoft	N/A	2.42	2.42	2.27	2.27	5bc09817-c75a-4277-c6cb-834edc3459ea

2. Under the **Line #** column, click the required number.
The product description and the SKU data source are displayed. As *BackEnd Sku* is selected as the source, the SKU mapping is done at the backend.

Invoice ID	Line Number	Product Description	Vendor Product ID	Collection SKU	Vendor Name	Cost	Price	Legacy/Modern flag	SKU Data Source
227706	10	Microsoft 365 Apps for business - Microsoft 365 Apps for business	COPYRIGHTS AND OTHER FEE'S	789-1000	microsoft	42.44	57.37	Modern	Back End Sku

Note:

- -
- The backend process maps Licensed billing type subscription and marketplace category by comparing the uploaded file with the provided MFPN.
- For the Microsoft vendor, the SKU mapping is processed at the backend and on the UI.

The following screenshot displays details of the NSAP backend file:

SKU	mfg_partno	vend_no (MSFT)	vend_name	fc_sku_no	Country
8144444	2.430E+10	Microsoft	MICROSOFT CSP (ION)	8144444	
7144444	2.395E+10	Microsoft	MICROSOFT CSP (ION)	6144444	

The NSAP backend file includes the following columns:

- Sku - SKU ID
- mfg_partno - Manufacturing part number
- vend_no(MSFT) - Vendor number
- fc_sku_no - Fully Consolidated SKU ID
- Country - Country name

The following screenshot displays details of the CIS backend file:

sku_no	mfg_partno	vend_no	vend_name
10000000	D2H356200CSD-0000-MONTH-COMMERCIAL-36	78982	MICROSOFT CSP (IOW)
10000000	D2H356200CSD-0000-MONTH-COMMERCIAL-36	78982	MICROSOFT CSP (IOW)

The CIS backend file includes the following columns:

- Sku_no - SKU ID
- mfg_partno - Manufacturing part number
- vend_no - Vendor number
- Vend_name - Vendor name

In the Default SKU Mapping process, the backend system maintains a table where default SKU values are pre-configured for specific vendors (and sometimes regions or countries). When an import job runs, if SKUs from the incoming file do not have explicit mapping, the system automatically uses the default SKU from the table, for that vendor. This eliminates the need for manual SKU mapping through the utility and prevents errors (such as red lines) during processing.

The following table includes the SKU mapping category and the data source.

SKU Mapping (Vendor)

Vendor	SKU Mapping
Microsoft	Backend SKU and UI SKU
Non-Microsoft - Avepoint, Acronis, Google, AWS, BitTitan, and so on.	UI SKU

SKU Mapping (Billing Type)

Billing Type	SKU Data Source	Mapping Through
License	Backend SKU	Backend mapping file
Usage	UI SKU	Collection SKU UI Or Default SKU

SKU Mapping (Category)

Category	SKU Data Source	Mapping Through
Reserved	Backend SKU	Backend mapping file
Perpetual	Backend SKU	Backend mapping file
PerpetualSoftware	Backend SKU	Backend mapping file
SoftwareSubscriptions	Backend SKU	Backend mapping file
Marketplace	Backend SKU	Backend mapping file
Consumption	UI SKU	Collection SKU UI Or Default SKU
Support	UI SKU	Collection SKU UI
