## Overview

The Insight application provides an overview of various tabs that allow users to generate detailed reports. It includes dashboards that are tailored to specific business needs, allows the tracking of cloud service usage, optimizes costs, and prevents misuse.

### Features of the Insight dashboard:

- Provides an overview of cloud usage and spending across multiple accounts, vendors, and services.
- Helps businesses track resource consumption trends.
- Allows users to create, customize, and share detailed reports according to specific business requirements.
- Customizes reports to focus on specific data points, time periods, and metrics.
- Tracks the consumption of cloud services and ensures efficient resource usage.
- Optimizes resource utilization and identifies areas where costs can be reduced.
- Alerts users about unusual or unauthorized usage patterns, to help prevent misuse.
- Provides custom templates for various industries, and helps users in generating relevant reports.
- Allows users to define and track custom metrics that are critical to their business operations.
- User-friendly interface that allows quick access to and management of data.
- Facilitates team collaboration by allowing multiple users to work on reports and dashboards simultaneously.

## About this document

This document includes information about various dashboards of the Insight application within a single platform, including Microsoft Pac Subscription Data, Microsoft Security, and Billing Reconciliation, offering real-time data and analytics to monitor cloud usage and performance.

# Getting Started

This section includes the following topics.

- [Obtain access to the environment](#)
- [Sign in to the StreamOne Business Operations Hub](#)

## Obtain access to the environment

To obtain full access to the Insight StreamOne Hub, ensure you have full access to the corresponding environment.

Insight includes the following environments.

| Environment | Web address                                                                                 |
|-------------|---------------------------------------------------------------------------------------------|
| INT         | <a href="https://int-streamone-hub.tdsynnex.org">https://int-streamone-hub.tdsynnex.org</a> |
| UAT         | <a href="https://uat-streamone-hub.tdsynnex.org">https://uat-streamone-hub.tdsynnex.org</a> |
| PROD        | <a href="https://streamone-hub.tdsynnex.com">https://streamone-hub.tdsynnex.com</a>         |

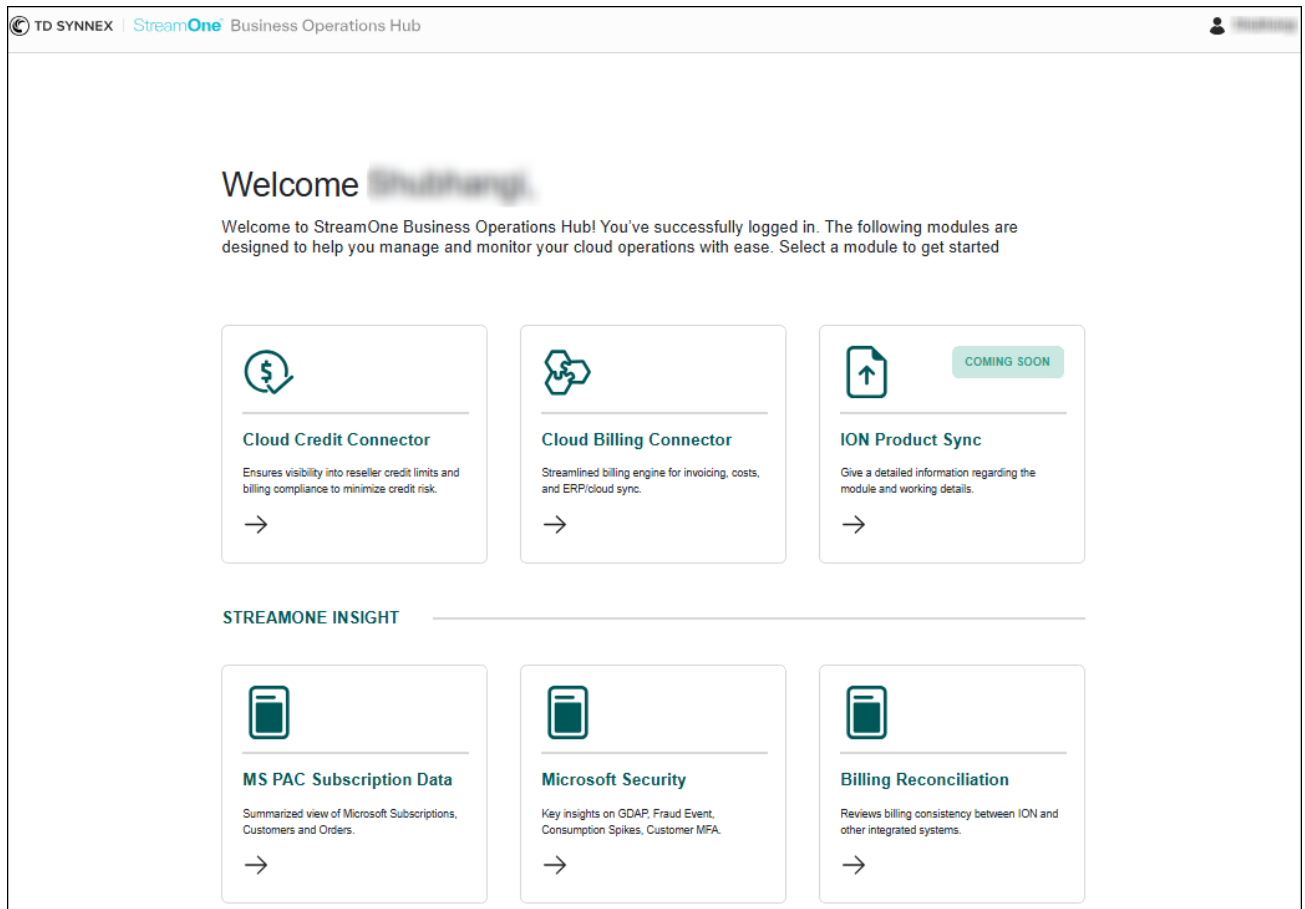

## Sign in to the StreamOne Business Operations Hub

Ensure that you have obtained permissions to access the corresponding dashboard of the STREAMONE INSIGHT application. To obtain access to the Insight dashboard, submit a ticket in Freshdesk. For more information, see “Creating a Freshdesk ticket”.

**To sign in to the Insight dashboard, perform the following steps.**

1. In the browser, enter <https://streamone-hub.tdsynnex.com>.

The StreamOne Business Operations Hub page is displayed.

2. In the **STREAMONE INSIGHT** section, you can click the tiles such as MS PAC Subscription Data, Microsoft Security, and Billing Reconciliation to access the respective dashboard.

The **STREAMONE INSIGHT** includes the following modules:

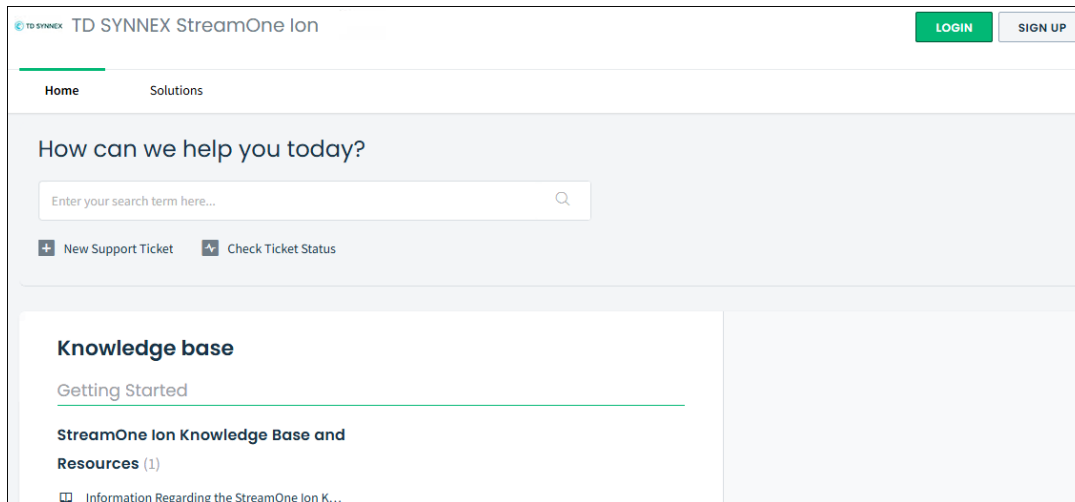

- MS PAC Subscription Data
- Microsoft Security
- Billing Reconciliation

## Creating a Freshdesk ticket

This section includes information about creating a Freshdesk ticket. For example, you can submit a ticket requesting access to the Insight dashboard.

**To create a Freshdesk ticket, perform the following steps.**

1. In the browser, enter <https://stream1.freshdesk.com>.  
The home page is displayed.

2. At the top-right, click **Login**.  
The **Login to the support portal** dialog box is displayed.

### Login to the support portal

Enter the details below

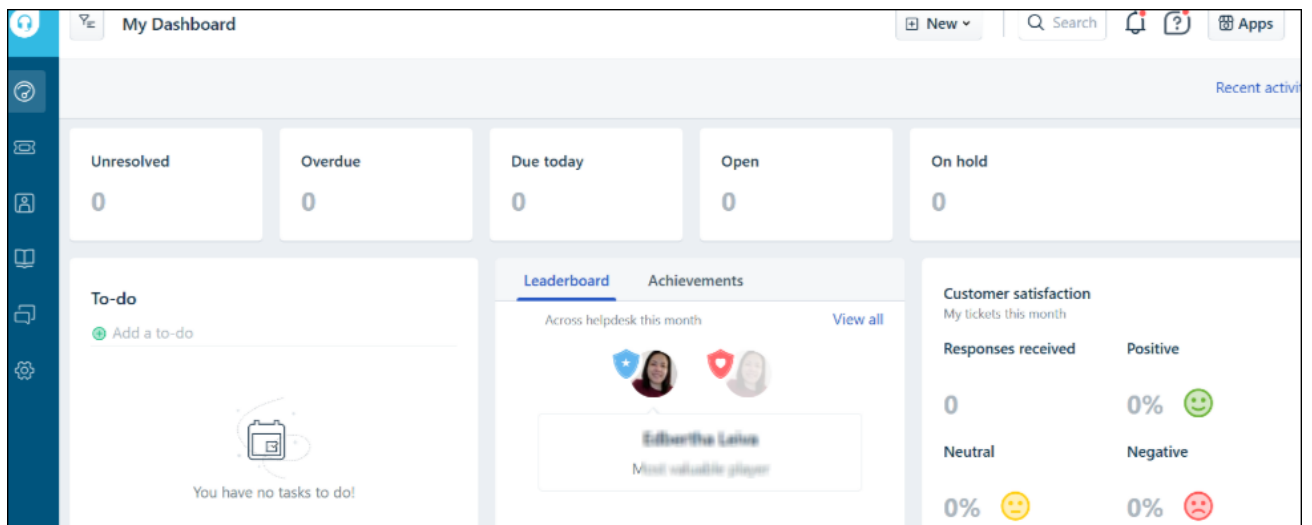

☐ Remember me on this computer

[Forgot your password?](#)

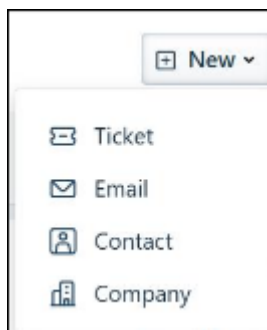

**LOGIN**

3. Enter your email address and password in the corresponding fields, and then click **Login**.

The **My Dashboard** page is displayed.

4. At the top-right, click the **New** drop-down.

5. Click **Ticket**.

The **New Ticket** page is displayed.

**New ticket** New ▾

The MS PAC Subscription Data includes the following tabs:

- **Microsoft Pac Subscription Data:** The Microsoft Pac Subscription Data tab allows you to view detailed information about their subscription usage and history.
- **Azure Reserved Instances:** The Azure Reserved Instances tab allows you to manage and optimize Azure reservations. This dashboard provides insights into how well your reserved instances are being utilized and provides value for your reservations.
- **Microsoft Pac Customer Data:** The Microsoft Pac Customer Data tab consolidates various data sources into a single, easy-to-navigate dashboard, making it simpler to manage and analyze the customer's information.
- **Microsoft Order Data:** The Microsoft Order Data tab provides up-to-date information on the status and progress of all orders. It consolidates the order data from various sources into a single dashboard, simplifying data management and analysis.
- **Microsoft Customer Transfer Data:** The Microsoft Customer Transfer Data tab provides a comprehensive view of all customer transfers, allowing you to track the status and progress of each transfer in real-time.

## Common filters

The following table includes the common filters.

| Filter                                                                                                                                                                                                                                                                                                                               | Filter Name   | Description                                                                                 |

The **SUBSCRIPTION DATA FOR CUSTOMER** dialog box displays the following tabs:

- **Customer subscriptions:** Identifies the customer or tenant and provides all the subscriptions associated with that customer.
- **Subscription Detail & History:** Provides all the details and history of the selected subscription.
- **Customer & Cloud agreements:** Provides details of the cloud agreement signed by customer associated with the subscription.
- **Customer Assigned Licenses:** Provides details of licenses associated with the subscription.
- **Audit History:** Provides details of associated subscription for the past 30 to 90 days.

Azure Reserved Instances filtered results

The Azure Reserved Instances tab provides detailed view pertaining to the selected reservation. Based on filters such as *PAC*, *Global Region*, *Reservation Type*, *Provisioning State*, and so on, users can focus on specific instances making it easier to analyze the data.

| PAC | Region | Customer                      | Reservation Name                 | Reservation Type | MPN ID  | Created Time          | Quantity | Provisioning State | Expiry Time           | Scope Type | Product Id   |

Microsoft Customer Transfer Data filtered results

The Microsoft Customer Transfer Data tab provides detailed information about each transfer request, including customer account information, transfer ID, source partner name, target partner name, subscription details, reseller information, and so on. This allows users to track and manage transfer activities efficiently across the entire lifecycle.

This dashboard displays all incoming and outgoing customer transfer requests. For incoming requests, it displays what the customer wants to transfer, such as the source partner name, target partner name, and so on. It also displays the status of each request, such as accepted, rejected, or pending. For outgoing requests that the provider sends, the dashboard lists each one and shows its status such as pending or accepted by the destination reseller.

| Transfer ID                          | Source Partner Name | Target Partner Name | Transfer Direction | PAC | Country | Transfer Type | CustomerName  | ResellerName | Date of Request Creation | Subscription Product | SubscriptionId | Transfer Status |

## Viewing Microsoft Security

The Microsoft Security dashboard provides real-time monitoring of security threats and risks, helping users stay informed about potential vulnerabilities. You can track compliance with security standards and regulations, ensuring the cloud environment meets necessary requirements. By consolidating security information in one place, it streamlines security operations and improves overall efficiency.

The screenshot displays the Microsoft Security dashboard interface. At the top, there are tabs for 'GDAP', 'Fraud Events', 'Fraud Events Consumption Spike', and 'Customers MFA and Access Policies'. Below the tabs, there are several filter sections with search bars and checkboxes for various attributes like PAC, Global Region, Region, Reseller, Customer, Permission Level, Relationship Name, Roles, Duration, Dap Enabled, Relationship Status, and Expiring In 30 Days. A summary row shows counts for different categories: # Customers DAP Disabled (49), # Customers DAP Enabled (489K), # Customers GDAP Enabled (400K), # Active (416K), # Approval Pending (49K), # Expiring in 30 Days (46K), # Expired (59K), and # Terminated (4777). Below this, a table lists individual customer records with columns for View Current, PAC, Region, Customer, DAP, GDAP, Relationship, Permission Level, Roles, Relationship Status, and Duration.

| View Current                 | PAC | Region    | Customer             | DAP | GDAP | Relationship                              | Permission Level | Roles                                                                                                                                                                                                                                                                                                    | Relationship Status | Duration |
|------------------------------|-----|-----------|----------------------|-----|------|-------------------------------------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------|
| <a href="#">View Current</a> | SCM | Australia | 00000000000000000000 | Yes | Yes  | GBM-e1fb5b55-9ecb-45d7-b695-b681b837e57f  | AdHoc            | Billing Administrator, Cloud Application Administrator, Directory Reader, Global Reader, Helpdesk Administrator, Intune Administrator, License Administrator, Password Administrator, Privileged Authentication Administrator, Security Administrator, Service Support Administrator, User Administrator | Active              | 1090 D.  |
| <a href="#">View Current</a> | SCM | Australia | 00000000000000000000 | Yes | Yes  | DMTx-5c3a5eca-0f0d-4fda-b62c-27f3b985128f | Limited          | Directory Reader, Service Support Administrator                                                                                                                                                                                                                                                          | Terminated          | 730 D.   |

This module includes the following tabs:

- **GDAP**
- **Fraud Events**
- **Fraud Events Consumption Spike**
- **Customers MFA and Access Policies**

- **Granular Delegated Admin Permissions (GDAP):**

Third parties can perform specific operations for tenants as designated. However, with the rise of digital currency and mining activities, unauthorized use of resources on these subscriptions became a concern. Several instances of fraud occurred without the customer's knowledge. To address this, Microsoft implemented a stricter policy called GDAP.

Instead of granting generic permissions, granular level permissions are now set up for members to perform actions. A relationship is established with the customer tenant, allowing a tenant admin who has established this relationship to perform operations with roles such as Billing Administrator and Directory Reader. These roles are displayed on the dashboard, below the filters.

**Note:** The highest permission is "Admin".

You can set up other delegate permissions.

TD SYNnex operates on behalf of several global tenants and is involved in placing orders, updating seats, modifying customer tenants or subscriptions. While performing these activities for customer tenants, the corresponding roles and permissions are applied. While enforcing GDAP, TD SYNnex migrated several DAP permissions to GDAP.

- **Fraud Events:** The Fraud Events tab helps users in identifying and monitoring potential fraudulent activities within the cloud environment. It provides detailed insights into fraud events, allowing users to analyze patterns and take preventive measures. By monitoring fraud events, users can enhance their overall security and protect their cloud resources more effectively.
- **Fraud Events Consumption Spike:** The Fraud Events Consumption Spike identifies significant spikes in resource consumption that may indicate fraudulent activities, such as unauthorized usage or cryptocurrency mining. This tab provides alerts for unusual consumption patterns, enabling users to respond quickly to potential fraud.

Users can analyze the specifics of the consumption spike, including which resources were affected and the extent of the spike. By monitoring these spikes, users can implement preventive measures to safeguard against future fraudulent activities.

- **Customers MFA and Access Policies:** These policies require customers and partners to use Multi-Factor Authentication (MFA) to access admin portals. This adds an extra layer of security by ensuring that only authorized users can access sensitive information. The policies include conditional access rules that help manage and control how users access resources. This can include enforcing MFA based on specific conditions like user location, device compliance, and risk level.

**Note:** The Fraud Events, Fraud Events Consumption Spike, and Customers MFA and Access Policies tabs are accessible only if a user has the required permission. To access these dashboards users must raise a Freshdesk ticket. For more information, see "**Creating a Freshdesk ticket**" on page "7".

## Common filters

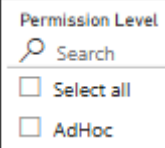

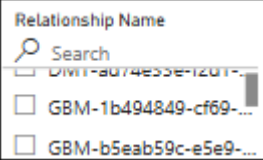

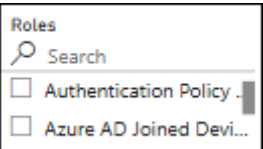

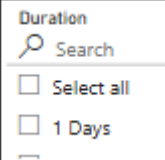

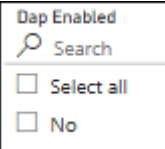

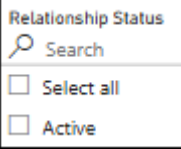

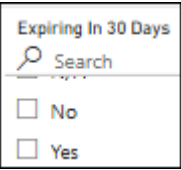

The following table includes the common filters.

| Filter                                                                                                                                                                                                                                                                                                                               | Filter Name   | Description                                                                                                     |

| <div> <div>Subscription Type</div> <div> <div>Search</div> <div> <input type="checkbox"/> Select all <input type="checkbox"/> legacy <input type="checkbox"/> modern </div> </div> </div>                              | Subscription Type | Specifies subscription type according to the selection such as legacy, modern, and so on. |
| <div> <div>Spike Type</div> <div> <div>Search</div> <div> <input type="checkbox"/> Select all <input type="checkbox"/> IncreaseFromAvg2DayPrice <input type="checkbox"/> IncreaseFromLastDayPrice </div> </div> </div> | Spike Type        | Specifies data according to the specific types of consumption spikes.                     |

## Customers MFA and Access Policies filters

The following table includes the filters specific to the **Customers MFA and Access Policies** tab.

| Filter                                                                                                                                                                                                                                                                                           | Filter Name   | Description                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|--------------------------------------------------------------------------------------------------------------------|
| <div> <div>Security Risk</div> <div> <div>Search</div> <div> <input type="checkbox"/> Select all <input type="checkbox"/> Access Restricted <input type="checkbox"/> High Risk (No Security Defaults OR Policies) <input type="checkbox"/> Low Risk (Has Security Defaults) </div> </div> </div> | Security Risk | Specifies security risk type according to the selection such as Access Restricted, High Risk, Low Risk, and so on. |

## Viewing filtered results

You can view filtered results for the following tabs.

- [Granular Delegated Admin Permissions \(GDAP\)](#)
- [Fraud Events](#)
- [Fraud Events Consumption Spike](#)
- [Customers Multi-Factor Authentication \(MFA\) and Access Policies](#)

## Granular Delegated Admin Permissions (GDAP) filtered results

The Granular Delegated Admin Privileges (GDAP) offers several filters to help partners manage and secure their customer relationships effectively. The filtered results provide various details, including the latest information under View Current, a list of assigned roles, the status of the relationship, and an indication of relationships nearing expiration within 30 days. Additionally, it specifies the customer tenant's domain, the creation date of the relationship, the activation date, and the end date of the relationship.

| View Current                 | PAC | Region    | Customer             | DAP | GDAP | Relationship                                | Permission Level | Roles                                                                                                                                                                                                                                                                                                    | Relationship Status | Duration |

## Fraud Events filtered results

Due to crypto currency mining, thefts, and several fraud events happening without the customer's knowledge, Microsoft implemented fraud detection logic in their system.

When they noticed unusual activity on tenants, they created fraud events on the PAC portal. This included events such as unusual usage spike and usage of unusual resources on subscriptions.

To view these events, members had to sign into the PAC portal regularly. These notifications are available in an API that is integrated with the Insight dashboard. On the Fraud Events dashboard, the fraud event notifications are downloaded and available for viewing purposes.

| PAC    | Region  | Reseller                                                  | Customer                                          | Display Name                                                                                                             | Event Status | Update Status                 | Event Type                            | Confidence Level | Severity |

- On the dashboard, the events are displayed along with the severity of the event such as *High* or *Medium*.
- Event Type includes usage anomaly, deployment of virtual machines, spikes, and so on.
- The results include information such as Reseller, Customer.
- Event Status includes statuses such as:
  - Active:** Newly created fraud events
  - Investigating:** Specifies that the event is being investigated.
  - Resolved:** Falsely identified events are marked as resolved.

Note: The notifications are no longer sent for the resolved events.

- Resource group, Resource Name that specify the fraud against the corresponding resource.
- Service Name specifies the services associated with the resource.
- Resolved On, Resolved By, and Resolved Reason specify the details of the resolved event.
- Subscription Id, EventId, Entity URL, Value Added Reseller Friendly Name, Affected Resources, Additional Details, and Description of the event are included in results.

## Fraud Events Consumption Spike filtered results

To accommodate additional fraud management such as additional fraud alerts, quick detection of frauds, granular monitoring, assessing the fraud source such as increased virtual machines (VMs), unusual usage, the Fraud Events Consumptions Spike dashboard was created.

- This dashboard is based on unused usage that we download for all the usage subscriptions.
- Using this dashboard, you can analyze daily usage of subscriptions, Daily Average of Previous Week, Daily Average of Recent 4 Weeks, Daily Average of last 2 days.
- Some formulas provided by product team and business team specify the variation permitted for these usages.
- For example, 50% or 70% spike is permitted for some usages. If the usage increases beyond this range, a notification is sent.

## Customers Multi-Factor Authentication (MFA) and Access Policies filtered results

While operating on behalf of a customer over a tenant, a customer MFA must be approved to access this dashboard. It also includes access policies created by the customer.

**Note:** It is mandatory to have policies and MFA for customers.

An admin operating on behalf of a customer tenant, must follow the access policies and the MFA to access the dashboard.

Microsoft advised customers to create security defaults such as 'no access' or define policies to provide conditional access.

The results include the Security Risk level such as

- **High Risk:** Includes no security defaults or policies
- **Low Risk:** Includes security defaults
- **Medium Risk:** Includes no security default but has policies

The results include columns such as Policy Count, User Count, Customer, Security Default Enabled, Prev Month Plan Consumption (USD), Has Power BI License, Has Business Voice License, Plan Id, Subscription Id, Customer TenantId, Security Defaults Name, Security Defaults Id, Access Error (Displayed when the customer has not accepted the security defaults)

## Viewing Billing Reconciliation

The Billing Reconciliation dashboard allows you to download all invoices in one location removing the need to log into each pack separately for analysis.

This dashboard streamlines and automates the billing process for consumption-based services. It helps in reconciling discrepancies between the upfront billed amount and the actual usage, which can vary in consumption-based pricing models. By automating the reconciliation process, it reduces the time, resources, and errors associated with manual reconciliation.

This module includes the following tabs:

- MS Reconciliation Files:**  
The MS Reconciliation Files tab provides detailed billing information for Microsoft services. It detects discrepancies between billed amounts and actual usage, supports financial auditing, and streamlines the reconciliation process, for efficient and accurate billing.
- ION Billing Reconciliation:**  
The ION Billing Reconciliation tab consolidates and reconciles billing data for various services provided through the platform. It ensures that all billing information is accurate and up to date, allowing you to efficiently track and resolve discrepancies. This dashboard makes it easier to review, analyze, and ensure accurate billing and timely revenue realization.

## Common filters

The following table includes the common filters of the **ION Billing Reconciliation** tab.

| Filter                                                                                                                                                                                                                                                                                     | Filter Name     | Description                                                                                                      |

## Viewing filtered results

You can view filtered results for the following tabs.

- [MS Reconciliation Files](#)
- [ION Billing Reconciliation](#)

## MS Reconciliation Files filtered results

All raw invoice reconciliation files downloaded from Microsoft are available on this dashboard, and it verifies if they loaded at the expected time.

On the dashboard, you can view the region such as modern or legacy, invoice Id, invoice date, billing type, and so on.

To download a reconciliation file, in the **Download Recon** column, click **Download**. The raw reconciliation file is downloaded from Microsoft to your machine.

## ION Billing Reconciliation filtered results

You can view data from ION and raw billing data or invoice files from Microsoft.

From this tab, you can confirm that all billing data is accurate and reconciled with actual usage and transactions, reducing errors and improving efficiency.

The **Reconciliation Summary** tab provides a summary of metrics related to reconciliation performance such as reseller level status, financial impact status, subscription level status helping users monitor and improve efficiency.

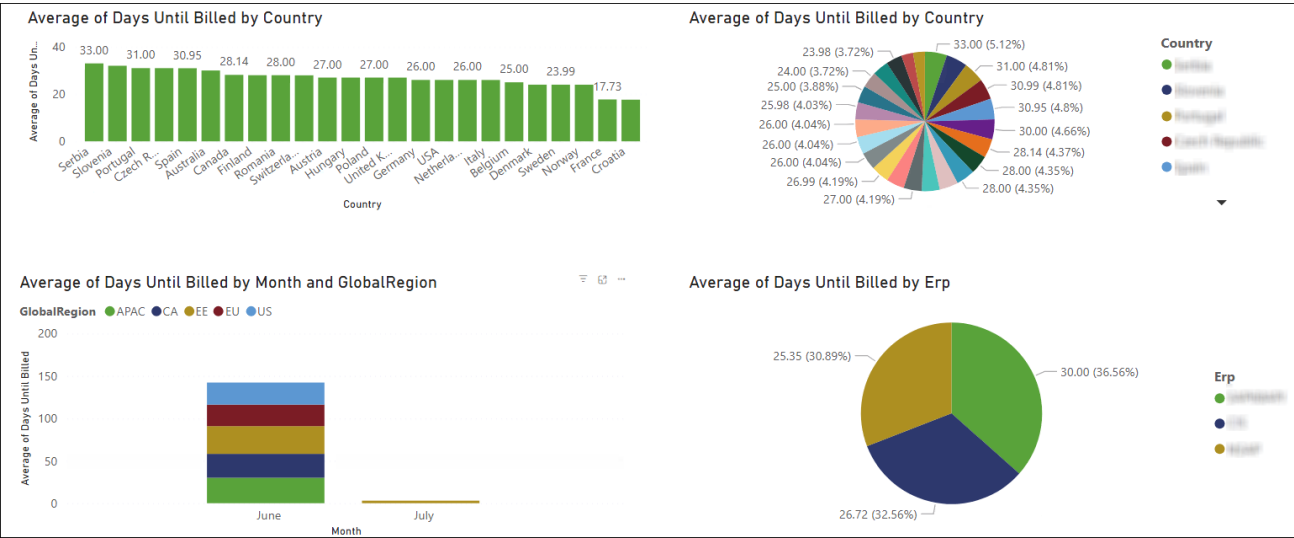

The **Reconciliation Detail** tab provides comparisons between data sets from ION and Microsoft. You can view issue types such as unassigned subscriptions and inaccurate costs.

Based on the comparison, if there is a cost difference or an unassigned subscription, it is highlighted. An unassigned subscription indicates that a subscription exists in the Microsoft pack but is not present in ION, or it is not included in the billing data downloaded from ION.

The **Billing Tracking** tab allows tracking the progress of billing activities, ensuring that all billing processes are on schedule. You can identify issues or delays in the billing process, enabling timely resolution. You can view the average of days of billed data, filtered by country, month, and so on.

The **Unassigned Customer** tab provides data for the subscriptions that are not yet assigned to end customers. This tab helps users to identify billing records or usage entries that have missed customer associations. This also allows users to investigate and assign the correct customer, and ensure accurate billing and reconciliation.

| Global Region | Country   | Vendor Name | Subscription Id                       | Status     |
